Subject: **Compatibility of Owens Corning tanks with biodiesel.**

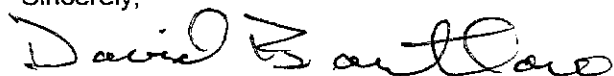

To Whom It May Concern:

All fiberglass underground storage tanks manufactured by Owens Corning are compatible with biodiesel blends up to 20 percent biodiesel (B20) by volume when stored at ambient temperature. The blend feedstock biodiesel (B100) must meet the requirements of the ASTM D-6751.

This statement of biodiesel compatibility is being provided to Owens Corning underground storage tank owners in California to allow them to store biodiesel blends in existing tanks for the three year variance period that is being allowed until 3<sup>rd</sup> party certification of compatibility is required. This should provide our past customers with sufficient time to modify or replace their Owens Corning tanks with systems that meet the 3<sup>rd</sup> party certification requirements that will then be in effect in California on June 1, 2012 for the continued storage of biodiesel fuels.

This statement of compatibility will remain in effect only until June 1, 2012.

Sincerely,

David Bartlow  
Manager, Tanks
