RE: Sumps and Biodiesel Compatibility

To Whom It May Concern,

This letter is to confirm our recommendation for the use of Western Fiberglass Sumps within a system containing Bio-diesel and Bio-diesel blends up to B-20.

All UL approved Co-Flex Piping and Sumps are manufactured of Bio-diesel compatible materials and have been tested by our suppliers for such a use. Both the pipe and sumps have shown no compromise of integrity when exposed to Bio-diesel.

Western Fiberglass sumps are fully endorsed and warranted for use within systems containing Bio-diesel and Bio-diesel blends up to B-20.

Please contact us with any questions or for additional clarification.

Thank you.
